FIG. NOTE

- 1 Orient the ball bearing so that the seal faces the commutator.
- 3,41 Orient the needle bearing such that the text is facing the gear. Press the bearing 0,4mm subflush to the gear cavity wall.
- 11 Tighten the handle lever screw such that it requires 2-3N force to close the handle lever to the locked position.
- 28,73 Position the pointer such that the arrow indicates between the zero and one degree mark on the bevel plate scale. Loosen front handle screws to adjust pointer.
- 29,31 Orient the baffle with the crush ribs aligned with the screw holes in the motor housing and the locator tabs aligned and seated as shown.

See Detail A

Detail A
- 30 Functionally check the lower guard with the saw set at full depth of cut and zero degree bevel. Place the saw upside down with the shoe horizontal. Retract the lower guard 100%. Release the lower guard lever. The guard should return in a brisk manner.
- 38 When tight, the depth adjustment lever should be parallel (±20°) with the shoe.
- 45 Orient the external retaining ring such that the beveled face is towards the guard.
- 60 When tight, the bevel adjustment lever should be bottomed out on the shoe. (Up to 2,5mm off the shoe is acceptable).
- 82 Orient the washer such that the rounded edge is towards the depth rail.
- 83 Orient the washer such that the rounded edge is towards the bevel plate.

FIG. 29 **LUBRICATION**
 Apply 10-11ml "Y" Grease, No. 49-08-5270, to gear bore of upper guard gearcase. The grease should be directed toward the pinion end of the armature.

29.43 Apply a light film of vegetable oil to the o-ring before assembling.

FIG. 9
 Adjust the "zero set" screw such that a disk, simulating a blade, is perpendicular to the shoe within 1/2 degree (0.5mm) at the outer diameter of the disk.

NOTE
 Adjust the "zero set" screw such that a disk, simulating a blade, is perpendicular to the shoe within 1/2 degree (0.5mm) at the outer diameter of the disk.
