- Equally distribute 1.5 gm. (.05 oz.) of grease on the lugs of the clutch gear (23), clutch shaft (27), separator spring (29) and the thrust washer (47).
- In the gearcase (19), place 3.6 gm. (.13 oz.) of grease in the counterbore above the inserted intermediate needle bearing (5).
- Place 13 gm. (.46 oz.) of grease at the armature pinion location in the gearcase (19) and fill to the top of the intermediate gear (24).

Before assembly, lightly coat all press fit areas with lightweight spindle oil.

Clutch gear and other gears are identical to other positive drive models.

Press bearing flush to casting. Single seal bearing seal towards front.

Clutch Housing Assembly, No. 14-08-0190 should be tightened to 45-55 in./lbs.

Dimples on adjustment band (item 33) must be positioned to rear in slot.

Bevel must be toward rear of tool.

Oil seal mounted flush with inside surface and lip must face gearcase.

Check function of locking collar by pulling part forward and inserting 1/4" power shank bit.

For ease of assembly, turn adjustment collar to lowest possible setting.
